Lampose - WhatsApp Message Flows

Who receives a WhatsApp message, when, and what it says. Sent through Twilio from Backend/src/infrastructure/twilio/twilio.js. If a template ID is not set in .env, the message falls back to plain text, which only reaches a number that messaged Lampose in the last 24 hours.

1. Property onboarding (agent adds a PG)

Triggered by POST /api/v1/properties.

Step	Event	WhatsApp goes to	Content
1	Onboarding agent submits the property	**Owner**	Approval request with the full details and YES / NO buttons
2	Owner replies **YES**	**Verifier** (random pick from VERIFICATION_TEAM_NUMBERS)	Owner, property, map link and review page link, with YES / NO
2	Owner replies **YES**	**Owner** (webhook reply)	"Thanks, our verification team will process your request"
2	Owner replies **NO**	**Owner**	"Request cancelled"
3	Verifier replies **YES**	**Owner**	"Your property is verified" with the live listing link. The property is created at this point.
3	Verifier replies **NO**	**Owner**	"Onboarding request rejected"

2. Student asks to visit a property (visit request)

Triggered when a customer requests a visit on the website. The customer only gets messages if they ticked the WhatsApp consent box.

Step	Event	WhatsApp goes to	Content
1	Customer verifies their SMS OTP	**Owner**	"Customer X wants to visit room Y. Reply AVAILABLE or NOT AVAILABLE"
2a	Owner does not answer in time	**Customer**	"The owner did not answer, your request expired and nothing was charged"
2b	Owner replies **NOT AVAILABLE**	**Customer**	"Owner says it is not available"
2c	Owner replies **AVAILABLE**, layout has a fee (everything except PG)	**Customer**	Fee amount and a Razorpay pay link
2d	Owner replies **AVAILABLE**, free category (PG)	**Customer**	Confirmation with address, directions and entry PIN

3. Paid assisted visit (after the customer pays)

Triggered by the Razorpay payment confirmation.

Step	Event	WhatsApp goes to	Content
1	Payment confirmed	**Customer**	"Payment received. Reply **Pick my slot**". App bookings get a receipt only.
2	Customer replies "Pick my slot"	**Customer**	Day-picker list
3	Customer picks a day	**Customer**	Time-picker list
4	Customer picks a time	**Customer**	"Visit confirmed" with slot, address and map
4	Customer picks a time	**Owner**	"Customer will visit on [slot] with a Lampose representative"
4	Customer picks a time	**Team** (VERIFICATION_TEAM_NUMBERS)	"Assisted visit scheduled"
5	Customer asks for a day/time not on the lists	**Team**	"Needs a call, please fix the day and time"

Step	Event	WhatsApp goes to	Content
6	Paid but no slot picked for 2 hours	**Customer**	One reminder to pick a slot
7	Payment is less than the fee (usually an old pay link)	**Team**	"Underpaid, arrange a refund"

4. Stay request in the app (student requests a stay)

Event	WhatsApp goes to	Content
Owner has no device registered for push	**Owner**	"New stay request, you have X minutes, open the Partner app". Normally the owner gets a push first.
Owner never answered and the request expired; student taps "Ask Lampose team"	**Stay-help team** (STAY_HELP_TEAM_NUMBERS)	"Call the owner, then reply AVAILABLE or UNAVAILABLE <ref>". Their reply updates the student's app.

5. Food order

Event	WhatsApp goes to	Content
Order becomes real (cash order placed, or online payment verified)	**Restaurant owner**	"New order" with an Open order button, sent alongside the push and socket alert
Same moment	**Diner**	"Your order is placed" with a tracking link
Restaurant accepts and picks a Lampose driver	**Delivery desk** (config.deliveryDesk.whatsapp)	Pickup, drop, customer and amount to collect
Restaurant switches to self-delivery	**Delivery desk**	"Delivery request cancelled"
RIDER_DISPATCH_MODE=whatsapp	**Every number in RIDER_DISPATCH_NUMBERS**	Full order with items and rider payout. No rider search happens in this mode and nobody replies.

6. Account and approval notices

Event	WhatsApp goes to	Content
Restaurant approved by an admin	**Restaurant owner**	"Congratulations, you are listed". The password goes by SMS, not WhatsApp.
Rider document rejected by an admin	**Rider**	Which document was rejected and why

Inbound replies

All replies arrive at one webhook, /api/whatsapp/webhook, and the reply word decides what happens: YES / NO goes to property verification; AVAILABLE / NOT AVAILABLE goes to the visit request; "Pick my slot" and the list picks go to the slot flow; AVAILABLE <ref> / UNAVAILABLE <ref> from the stay-help team goes to the stay request.
